

## \* STARTING & FILLING YOUR SPA:

- 1- Add Stain & Scale product to your spa water as you fill, **IN COLD WATER.**  
**PREVENT II:** \_\_\_\_\_ ml. for full fill ~ ~ ~ or \_\_\_\_\_ ml. per foot
- 2- Once filled, turn power on, turn all pumps on full & set desired temperature.  
Put chlorine tablets (**SPA TABS**) in dispenser & add 1 Tablespoon of granular chlorine (**CHLOR-AID.**)  
Run all pumps on high speed with the cover open for 15 minutes, then close cover and let water heat up.
- 3- Once heated, add your weekly dose of **AQUAFINESSE™**: \_\_\_\_\_ ml.
- 4- On a different day, add your weekly dose of **SPA PERFECT**: \_\_\_\_\_ ml.

**Rinse your spa filter(s) the day after filling your spa. USE JET PRESSURE!**

---

## \* WEEKLY MAINTENANCE:

- 1- Test your water and balance if required.
  - 2- Check and add chlorine tabs (**SPA TABS**) in your dispenser if needed.
  - 2- Add your weekly dose of **AQUAFINESSE™**: \_\_\_\_\_ ml.
  - 3- Add your weekly dose of **SPA PERFECT**: \_\_\_\_\_ ml. (not on the same day as **AQUAFINESSE™**)
  - 4- **Rinse your filters with pressure every week.** For best results, use a "FILTER FLOSSER" or "AQUA COMB"
- 

## \* REGULAR MAINTENANCE AND USEFUL RECOMMENDATIONS:

- 1- Soak your filters monthly using **AQUAFINESSE™ FILTER CLEANING TABLETS**:
  - Rinsing is NOT ENOUGH. You need to soak them to remove oils, organic waste and calcium.
- 2- Make sure your spa filter cycles are set properly:
  - **Set and keep on "STANDARD MODE" always.** ~ (see manual for details)
  - Program a MINIMUM of 8 hours per day. (F4 or FIL4). ~ (see manual for details)
  - Or if equipped with a 24 hour system, program accordingly. ~ (see manual for details)
- 3- **Drain 1 foot and refill every 3 months:** Have your water tested before to know exactly how much to drain.
  - It's important to replenish your spa water regularly by draining and refilling.
  - Repeat start up procedure each time you drain and refill. ~ (see start and fill section)
- 4- **Clean & drain your spa once per year:**  
Before you drain your spa, we recommend you flush and clean the plumbing to ensure that all parts are cleaned from chemical build-up. For best results, use the **AQUAFINESSE™ SPA CLEAN TABLET.**

## TESTING YOUR SPA WATER :

**CHLORINE: KEEP LEVELS BETWEEN 1 & 3:** Use **SPA TABS** and/or **CHLOR-AID** to regulate.

**ALKALINITY: KEEP OVER 120 AT ALL TIMES:** This means in the top 2 blocks on your strips (**180-240**)  
To raise it use **ALKA-RISE**, 4 caps at a time and retest a few hours later. Repeat if required.  
There is no need to reduce Alkalinity when using **AQUAFINESSE™**.

**PH: KEEP OVER 7.4 AT ALL TIMES:** If it's low, it is usually caused by low Alkalinity. Adjust it first!  
No need to reduce the PH level when using **AQUAFINESSE™**.

**CALCIUM: KEEP OVER 150:** Do not fill with soft water. If it's below 150, have water tested and adjust.

## HELPFUL TIPS & TRICKS

\*\*\* If your water is foaming/yellow/green/smelly, it's usually caused by **LOW CHLORINE.** To repair the problem, add 1 tablespoon of **CHLOR-AID**, turn pumps on high speed & retest after 2 hours.  
Keep chlorine between 1 & 3: Fill floater with more chlorine pucks / add pucks more often / adjust floater.

\*\*\* Cloudy water is usually caused by dirty/clogged filters:  
Rinse them weekly, with lots of pressure & soak them in a cleaning solution more often!  
If you don't have the necessary system to do this at home, bring them in.
